## AIMS OF THE COURSE

The aim of the course is to show, using videotapes, how to perform different therapeutic endoscopic techniques. As they are recorded cases it is possible to show in a short time two or three examples of each technique, focusing on the specific details which allow the desired result to be reached.

At the end of each session the results obtained with the different techniques will be briefly presented. When the cases offer several possibilities, a discussion will be held in order to decide which is the best for each specific case. Attendants will be given the opportunity to discuss with the experts the aspects of the different techniques which most interest them.

We believe the subjects presented to be some of the most up to date topics in therapeutic endoscopy nowadays. Considering the prestige of the endoscopists invited in the panels, we hope that every attendant will find great profit in this course.

**Simultaneous translation:** During the course, simultaneous translation English-Spanish and Spanish-English will be provided.

With the sponsorship of the Spanish Society of Digestive Diseases, the Spanish Society for Gastrointestinal Endoscopy, the American Society for Gastrointestinal Endoscopy and the European Society of Gastrointestinal Endoscopy.

Declared "of interest in Health Care" by the Health Department of the Government of Navarra (Spain).

\*Accredited by the Council for Continuing Medical Education (CME) of the Spanish National Health System with 3,27 credits.
