Laser endoscopy, oesophageal stents, photodynamic therapy 	Approximate number per year: 1000 400 80 300
Description	<p>The Department of Gastroenterology at University College Hospital is one of the largest and busiest units in London. As well as providing care to the local community within North Central London, the unit has a wide referral base, with patients seen from all parts of the UK. An extensive range of advanced diagnostic and therapeutic services are provided, covering all areas of Gastroenterology and Hepatology. The unit has a national reputation for its complex endoscopic service, including advanced laser therapy and pancreaticobiliary endoscopy. More than 6000 endoscopies are performed each year in the department, of which > 1200 are ERCPs or pancreaticobiliary EUS examinations. The provision of new imaging and endoscopic facilities in the new hospital (moving in in September 2005), will allow for further expansion and efficiency of the current service of 9 ERCP/EUS lists weekly. The unit has a strong research base, with strong and active academic links with the adjacent biomedical sciences and the Institute of Hepatology (www.ucl.ac.uk/medicine/hepatology/) at University College London</p>	
Lodging	available in the hospital	
Requirements	Certification of qualification	
Possible period	All year apart from August
