ESGE news and upcoming events
March 2022

ESGE Days 2022

If you haven’t already, be sure to secure your Early Bird discounted registration for the essential international event in the endoscopy calendar. Those who can’t join us in the beautiful city of Prague can make the most of our state-of-the-art HYBRID event where an interactive and comprehensive programme is also offered.

Abstract acceptances announced

The ESGE Days 2022 Scientific Committee was very impressed with the number and quality of the abstracts submitted to our congress. We are happy to publish, at esgedays.org, the full details of our top 4 abstracts, who will be featured in the opening plenary session of the congress, and also the 60 recipients of travel grants. All accepted abstracts will be published in a special edition of Endoscopy journal. Thank you to all submitters!

Unmissable sessions

Did you know that ESGE Days 2022 has 13 scientific partnering societies from around the world? They will be featured in our Joint Sessions – curated to showcase our rich international knowledge base of both endoscopic and disease related societies with vital topics covered including CRC, AI, bleeding and much more.

Another must-see for all delegates is the Presidential session led by current ESGE President Helmut Messmann and future President Ian Gralnek.

New ESGE Technical Review

Therapeutic endoscopic ultrasound: European Society of Gastrointestinal Endoscopy (ESGE) Technical Review

R. L. J. van Wanrooij, M Bronswijk, R. Kunda et al.
Please read page 310–332 in this issue of Endoscopy.

For a cutting-edge discussion of what will define the future of health, this session will look beyond the endoscopy unit with the following presentations:

- Appetite for destruction: The day after tomorrow in digital medicine
- On the way to a joint success story: Robotics technology and the medical sector
- How much health can we buy with one ton of CO2?

Explore our full scientific programme and register now at esgedays.org

This technical review is an official statement from the European Society of Gastrointestinal Endoscopy (ESGE). It provides practical guidance on various therapeutic EUS procedures, as well as salvage measures in the event of procedural failure or adverse events. This review is complementary to the recently published comprehensive ESGE guideline on the use of therapeutic endoscopic ultrasound in clinical practice.
Are you concerned about the impact of COVID-19 on CRC screening?

Apply for the ESGE Norgine Research Award – the deadline is March 15, 2022.

This award aims to revive and accelerate colorectal cancer screening programmes during the COVID 19 pandemic. A total of €15,000 will be awarded to the institutions of up to 2 winners to support scientific research in CRC screening, with a particular focus on the recovery and acceleration of colonoscopy screening services during and post the COVID-19 pandemic.

Apply here: www.esge.com/grants/esge-norgine-research-award/

When will we see you again?

Attend the following ESGE endorsed events and take advantage of the registration fee reduction as an ESGE individual member.

Karolinska Live
March 17–18, 2022
Hilton Stockholm Slussen, Stockholm, Sweden
https://karolinskalive.com/
